

Test of AkkuFresh® by Matsushita Electric Co. Ltd. (Panasonic, Technics, JVC)

Comparison of voltage change between lithium-ion batteries with and without AkkuFresh® (Tested under the collaboration with Matsushita Electric Co. Ltd.).

The feature of lithium-ion battery for mobile phone is to keep going on with the same voltage for a certain time and to fall the power down sudden and sharply upon the charged electric power be used up.

The test result clearly indicates the battery with AkkuFresh® put on lasts much longer as shown by the graph.

Lower graph = battery with AkkuFresh®

Upper graph line = battery without AkkuFresh®

Matsushita Electric Co. Ltd. has clearly proved the effectiveness of AkkuFresh® Next Generation™ - the original nano-tech battery life foil technology.

The effect and performance of AkkuFresh® Next Generation™ depends on several factors: Type of device (mobile phone / notebook / camera / etc.), brand, model – type of battery, age, status (total amount of charging-discharging cycles), external temperature, environmental conditions and cellular network
